

COMPLETE RECRUITMENT CYCLE (END-TO-END ATS FLOW)

1. System Objective

Build an AI-powered ATS that manages the full recruitment lifecycle from requirement intake to candidate joining, with structured approval workflow and intelligent screening.

2. End-to-End Workflow (High-Level Flow)

Requirement Intake
→ Job Creation
→ Candidate Sourcing
→ AI Screening
→ Recruiter Shortlisting
→ Manager Review
→ Internal Screening Interview
→ Final Shortlisting
→ Submission to Client
→ Client Interviews
→ Offer
→ Joining

3. Detailed Workflow with Ownership

Stage 1: Requirement Intake

Owner: Manager

- Capture JD, skills, experience, location, budget
 - Define mandatory vs optional skills
-

Stage 2: Job Creation

Owner: Manager

- Create job in system
 - AI parses JD into structured data
 - And assign to respective recruiter
-

Stage 3: Candidate Sourcing

Owner: Recruiter

- Source from Naukri, LinkedIn, database
 - Upload resumes (bulk/single)
-

Stage 4: AI Screening

Owner: System (AI) + Recruiter

- Match candidates with job
 - Generate:
 - Match score
 - Skill match & gaps
 - Experience fit
-

Stage 5: Shortlisting

Owner: Recruiter

- Review AI-ranked candidates
 - Move relevant profiles to Manager Review
-

Stage 6: Manager Review (Approval Layer)

Owner: Manager

- Validate profile quality
 - Approve / Reject with comments
-

Stage 7: Internal Screening Interview

Owner: Internal Interview Panel

- Conduct technical/functional interview
- Provide structured feedback:
 - Technical rating
 - Communication rating
 - Recommendation

Stage 8: Final Shortlisting

Owner: Manager

- Prepare candidate summary
 - Final validation before submission
-

Stage 9: Submission to Client

Owner: Manager

- Submit candidate
 - Track submission history
-

Stage 10: Interview Coordination

Owner: Recruiter + Manager

- Schedule interviews
 - Coordinate with client & candidate
 - Track feedback
-

Stage 11: Offer Stage

Owner: Manager + HR

- Salary negotiation
 - Offer approval workflow
 - Offer release
-

Stage 12: Joining & Closure

Owner: HR

- Track joining date
 - Handle dropouts
 - Close requirement
-

4. Candidate Status Flow (Pipeline)

Sourced

- Screened
- Shortlisted
- Manager Review
- Approved
- Internal Screening Interview
- Selected
- Submitted
- Interview
- Offered
- Joined

OR

- Rejected / Dropped (at any stage)
-

5. Core System Modules

5.1 Job Module

- Job creation & management
- JD parsing (AI)
- Job status tracking

5.2 Candidate Module

- Resume upload & parsing
- Candidate database
- Duplicate detection

5.3 AI Screening Module

- Candidate-job matching
- Scoring (0–100)
- Skill gap analysis

5.4 Approval Module

- Manager review workflow
- Approval/rejection tracking

5.5 Interview Module

- Internal interview scheduling
- Feedback capture

- Client interview tracking

5.6 Submission Module

- Candidate submission to job
- Submission history

5.7 Offer Module

- Offer tracking
- Approval workflow (Manager + HR)

5.8 Dashboard & Reports

- Recruiter performance
 - Funnel conversion metrics
 - Time to hire
-

6. AI Requirements (Key Feature)

System should provide:

- Resume parsing
- JD parsing
- Semantic matching (not just keyword)
- Match score with explanation
- Skill gap identification

Example Output:

- Score: 82%
 - Matching Skills: Playwright, API
 - Missing Skills: Cypress
 - Recommendation: Strong Fit
-

7. User Roles

Recruiter

- Source, screen, shortlist
- Submit candidates
- Coordinate interviews

Manager

- Approve profiles
- Monitor pipeline

- Support interview coordination

Internal Interview Panel

- Conduct internal screening
- Provide feedback

HR

- Manage offer process
- Release offers
- Handle onboarding

Admin

- Full system control
-

8. Key Controls & Rules

- Manager approval required before submission (configurable)
 - No duplicate candidates
 - Candidate can be mapped to multiple jobs
 - Full audit trail (who did what)
 - Role-based access
-

9. Key Metrics to Track

- Sourcing → Shortlisting ratio
 - Shortlisting → Approval ratio
 - Approval → Selection ratio
 - Submission → Offer ratio
 - Offer → Joining ratio
-

10. Final System Expectation

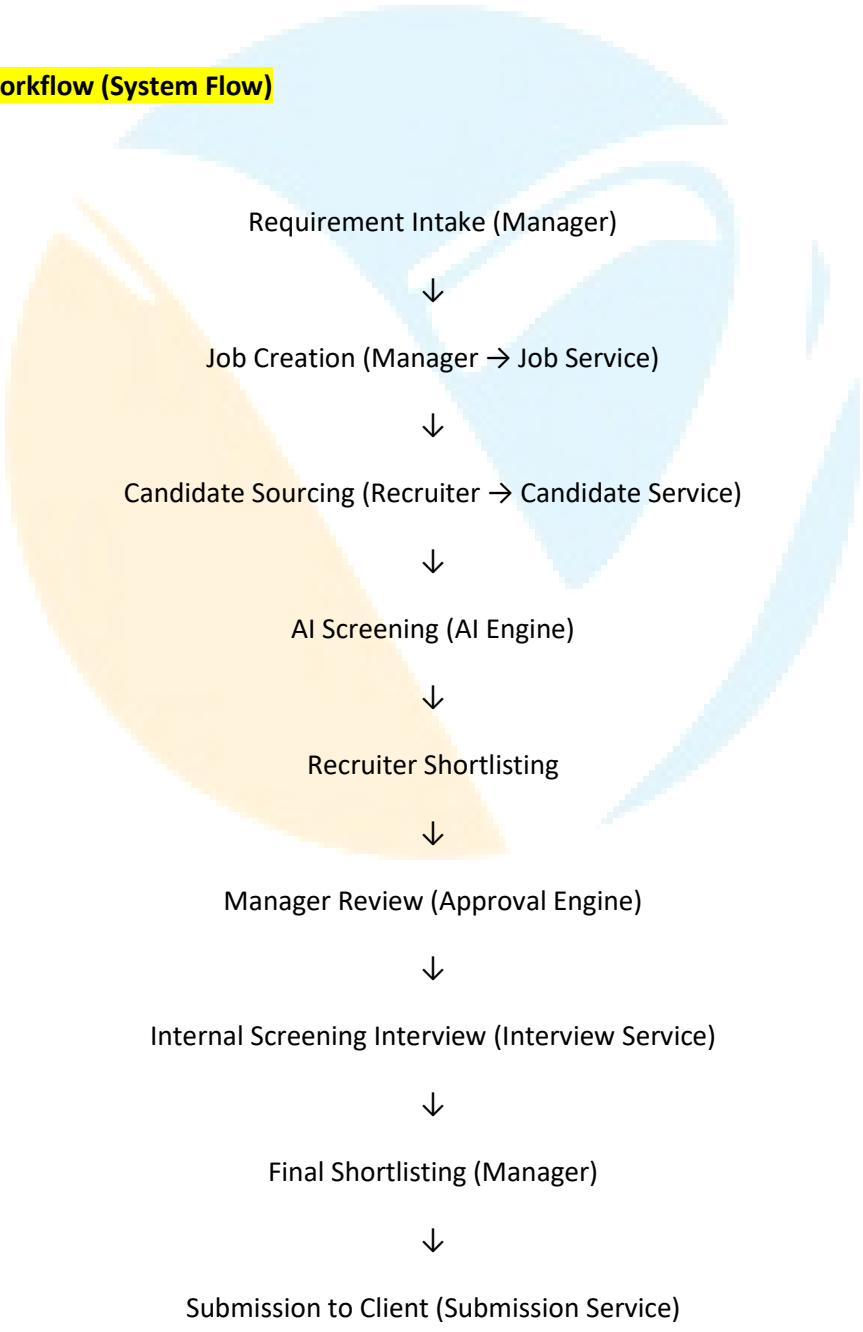

System should:

- Reduce manual screening effort
- Improve candidate quality
- Provide clear decision insights
- Enable full visibility of recruitment pipeline
- Support multi-level approval workflow

TECHNICAL MODULE MAPPING (SYSTEM ARCHITECTURE)

Module	Responsibility
Job Service	JD creation, parsing, assignment
Candidate Service	Resume parsing, storage, duplicate detection
AI Engine	Matching, scoring, recommendation
Workflow Engine	State transitions, approvals
Interview Service	Scheduling, feedback capture
Submission Service	Client submission tracking
Offer Service	Offer approval & release
Reporting Service	Metrics & dashboards

End-to-End Workflow (System Flow)

Client Interview (Interview Service)

Offer (Offer Service + HR)

Joining & Closure (HR)
